

For Best future.... More Services Resource Management System.... A qualitative Leap by
IRCS

Iraq Red Crescent Society consider the first society in Asia Pacific at MENA zone that used the Resource management system, the electronically system. All these based on the good vision of Dr. Yassen Ahmed the President of IRCS and Mr. Farid Abdulkadir the Head of Delegation at IFRC MENA Region, and their serious quest to develop IRCS.

Agreement is signed between the Iraqi Red Crescent Society (hereafter called the “Iraqi RC”), the International Federation of Red Cross and Red Crescent Societies (hereafter “IFRC”) represented by the Middle East and North Africa Region office (hereafter “MENA Region”), and the supplier “AidIQ” to confirm the terms and conditions for the use, management, development and training of the Resource Management System (hereafter called the “RMS”).

RMS is a web-based, GIS-enabled system that supports National Societies’ and IFRC’s program management activities. It helps National Societies to manage their human and material resources and view this information on map together with various demographic and vulnerability related overlays. It also allows them to collect and analyses field assessments, track key information of programs and projects in addition to communities’ vulnerability and resilience levels.

RMS has been developed in conformity with the Declaration of 7th Asia Pacific Conference in Singapore 2006, which “called on all National Societies to develop and use a disaster management resource mapping database at national and regional levels based on guidelines established by the Federation.” As a result of successful piloting and implementation in National Societies of the Asia Pacific zone, it is now available as a tool for all National Societies around the world, and accordingly, the Iraq RC is signed the agreement to install and use this software.
